written for the Australian and New Zealand markets the second edition of Business Analytics Statistics Black et al presents statistics in a cutting edge interactive digital format designed to motivate students by taking the road blocks out of self study and to facilitate master through drill and skill practice

Students preparing for courses in real analysis often encounter either very exacting theoretical treatments or books without enough rigor to stimulate an in depth understanding of the subject further complicating this the field has not changed much over the past 150 years prompting few authors to address the lackluster or overly complex dichotomy existing among the available texts the enormously popular first edition of Real Analysis and Foundations gave students the appropriate combination of authority rigor and readability that made the topic accessible while retaining the strict discourse necessary to advance their understanding the second edition maintains this feature while further integrating new concepts built on Fourier analysis and ideas about wavelets to indicate their application to the theory of signal processing the author also introduces relevance to the material and surpasses a purely theoretical treatment by emphasizing the applications of real analysis to concrete engineering problems in higher dimensions expanded and updated this text continues to build upon the foundations of real analysis to present novel applications to ordinary and partial differential equations elliptic boundary value problems on the disc and multivariable analysis these qualities along with more figures streamlined proofs and revamped exercises make this an even more lively and vital text than the popular first edition

Digital textbook addressing the area of business analytics

introducing time series methods and their application in social science research this practical guide to time series models is the first in the field written for a non econometrics audience giving readers the tools they need to apply models to their own research introduction to time series analysis by mark pickup demonstrates the use of and the assumptions underlying common models of time series data including finite distributed lag autoregressive distributed lag moving average differenced data and garch arma arima and error correction models this volume does an excellent job of introducing modern time series analysis to social scientists who are already familiar with basic statistics and the general linear model william g jacoby michigan state university

spline variables and their interactions play a crucial role in the field of social science this book offers a comprehensive and detailed exploration of this method providing valuable insights and information for researchers in the field man kit lei the university of georgia this volume addresses the issue of linear constraints in regression modeling author roger a wojtkiewicz uses the method of knotted spline variables also known as piecewise linear regression and a new method involving group spline variables to model nonlinearity in a variety of situations using spline variables to model nonlinearity allows researchers to specify unrestricted models for models that involve interval variables allowing for greater flexibility in modeling any possible interaction

a specialized presentation of fractal analysis oriented to the social sciences this primer uses straightforward language to give the reader step by step instructions for identifying and analyzing fractal patterns and the social process that create them by making fractals accessible to the social science students this book has a significant impact on the understanding of human behavior this is the only book designed to introduce fractal analysis to a general social science audience

this book introduces current perspectives on rasch measurement theory with an emphasis on developing rasch based scales rasch measurement theory represents a paradigm shift in measurement theory away from classical test theory and creates a framework for scaling that can yield invariant measurement rasch models for solving measurement problems invariant measurement in the social sciences is a broadly accessible text authors george engelhard jr and jue wang introduce rasch measurement theory step by step with chapters on scale construction evaluation maintenance and use points are illustrated and techniques are demonstrated through an extended example the food insecurity experience fie scale the rasch analyses in the book are run using the facets computer program facets syntax and r code for the erma program created by the authors to obtain parameter estimates and to examine model data fit together with sample data sets are all available on a website for the book

explores even the fundamental assumptions underlying mediation analysis

social scientists are interested in events and their causes although event histories are ideal for studying the causes of events they typically possess two features censoring and time varying explanatory variables that create major problems for standard statistical procedures several innovative approaches have been developed to accommodate these two peculiarities of event history data this volume surveys these methods concentrating on the approaches that are most useful to the social sciences in

particular paul d allison focuses on regression methods in which the occurrence of events is dependent on one or more explanatory variables he gives attention to the statistical models that form the basis of event history analysis and also to practical concerns such as data management cost and useful computer software the second edition is part of sage s quantitative applications in the social sciences qass series which continues to serve countless students instructors and researchers in learning the most cutting edge quantitative techniques

understanding regression analysis an introductory guide by larry d schroeder david l sjoquist and paula e stephan presents the fundamentals of regression analysis from its meaning to uses in a concise easy to read and non technical style it illustrates how regression coefficients are estimated interpreted and used in a variety of settings within the social sciences business law and public policy packed with applied examples and using few equations the book walks readers through elementary material using a verbal intuitive interpretation of regression coefficients associated statistics and hypothesis tests the second edition features updated examples and new references to modern software output
